

Summary of fertilisers and pesticides

Sold in bulk at the Gordon Road Trading Hut
Information from BHGS (<https://www.bhgsltd.co.uk/>)

Growmore Granular by BHGS

7-7-7 (Nitrogen-Phosphorus Pentoxide-Potassium Oxide)
Apply at a rate of 35-70 grammes per square meter
Keep away from children, pets and food
Wash hands after use

Garden Lime by BHGS

Acid soils: apply annually, September onwards at 200-400g/ square meter
Normal soils: apply every 2-3 years at 200g/square meter
Analysis: neutralising value CaO, 51%

Fish, Blood and Bone by BHGS

Apply at a rate of 35-70 grammes per square metre
Keep away from children, pets and food
Wash hands after use

Bone Meal by BHGS

Bonemeal is an organic based general purpose plant food that provides the major nutrients for strong, healthy growth, rapid boost.

- Lasts up to 6 weeks
- Analysis
- Application/Application Rate
- 3.5-18-0
- 135g/m²

Pelleted Poultry Manure (pH 6.5-7.0)

6X Pelleted Poultry Manure is a popular choice amongst gardeners looking for a 100% natural fertiliser that is concentrated, easy to spread and odourless.

6X is an ideal organic feed for flowers, lawns, vegetables, pot plants and baskets too, it contains trace elements which feed the soil. As it is highly concentrated, users only need to use handfuls of pellets rather than barrowloads.

- Weed and bug free
- No added ingredients

- Safe for all garden life and encourages the earthworm population

6X Pelleted Poultry Manure feeds the soil rather than the plant and needs to be mixed thoroughly with existing soil for maximum results. Always water plants and crops in once planted as it is the nutrient uptake through the roots which boosts growth.

Maxicrop Original from BHGS

Maxicrop Original is a pure seaweed extract containing 8% (W/W) soluble seaweed solids including a wide range of plant growth stimulants and trace elements present in all our extracts.

Maxicrop Original is approved for organic growing by the Soil Association and Guild of Conservation Grade Producers.

Key Points:

- Encourages rooting & root development leading to a bigger root structure
- Increases beneficial bacteria and microbes in the soil leading to more availability of nutrients in the soil
- Improves chlorophyll content in leaves - maximising energy produced by photosynthesis
- Boosts a plants natural defences & health
- Improves tolerance to plant stress: drought & frost

| | | |
|---|--|--|
| New Seed - germinating | 10-20ml in 9L water | Soak seeds for 12hrs before sowing |
| Root dipping | 1:350 | Bare root soak before planting |
| Propagating & transplanting | 20ml in 9L water | Drench rootball |
| Plants | 45ml in 9L water | Root drench |
| Fruit Crops | 45ml in 9L water | Spray before & during flowering |
| Lawns & Turf | 50ml in 9L water | Covers approx 20m² |
| Commercial crops including grassland | 3L/ha in 200-400L water per hectare | Apply every 10-14 days |

Maxicrop Tomato Fertiliser

Maxicrop plus Tomato fertiliser is a potassium enriched seaweed extract and fertiliser (5.1:5.1:6.7) that provides bio-stimulant benefits alongside the right mix of nutrients for productive growth.

While specifically formulated to improve size, shape and flavour of tomato crops, Maxicrop Plus Tomato Fertilizer can also be used across a range of horticultural crops.

Tomato Fertiliser will enhance natural growth processes, leading to greater rooting and establishment, while producing strong, healthy growth with improved resistance to pests, diseases and environmental stress.

Maxicrop Seaweed Extract Plus Tomato Fertiliser will improve the size, shape and flavour of tomatoes. Also ideal for other greenhouse crops as well as flowering plants, especially in hanging baskets and containers.

Directions:

- Shake before use.
- Add required amount to water and stir well.
- Apply using watering can.
- Protect from frost.
- General and Growing Bags: 15ml in 4.5 L water

Vitax Q4

Vitax Q4 Pelleted Fertiliser is a favourite amongst experienced gardeners and as an outstanding all-purpose fertiliser.

Originally developed for the commercial grower, Q4 Fertiliser is the trusted choice for producing bigger, brighter blooms and bumper crops.

Q4 Pelleted Fertiliser:

- Apply throughout the growing season
- Contains vital plant foods and trace elements essential for abundant growth of flowers and crops
- An easy to handle, low dust, pelleted fertiliser.

For best results, apply Vitax Q4 evenly to soil, preferably when it is wet in the following situations:-

- Ideal for roses either prior to planting out or for established bushes when it can be applied as a top dressing in the spring.
- Can be applied to the growing media before sowing and planting flowers and vegetables.
- It can then be used as a top dressing once or twice during the summer months to encourage crops.
- As well as using Q4 Pelleted Fertiliser for flowers and vegetables, it is also ideal for fruit, tomatoes and chrysanthemums.
- Can be used on lawns prior to seed sowing or laying turf.

Rose Fertiliser

A specially formulated fertiliser which promotes strong roots, healthy stems & fine blooms

- Application Rate 70 - 140g/m²

Sluxx HP Blue pellets from BHGS

Sluxx HP is a ferric phosphate pellet.

Sluxx HP has excellent anti-moulding properties, the deep blue pellet is highly efficacious against all relevant slug species. The technology used in Sluxx HP has a novel mode of action, feeding ceases immediately following consumption of the bait. Slugs retreat underground to die, often there will not be any evidence of dead slugs so it is more effective to monitor the level of crop damage.
